

#Green Source

Responsible products start with a green source

FOR MORE INFORMATION
eugreensource.org

It grows annually by
612 Million m³
(Net annual increment)

European forests keep growing

The total volume of Europe's forests is
28 Billion m³

Growing stock in forests and other wooded land:
28,162,000 m³

The annual harvesting is
455 Million m³
(Annual fellings)

RENEWABLE RESOURCE

Sustainable forestry preserves biodiversity and ensures parts of the tree are also left in the forest to maintain natural nutrition cycles and provide habitats

Forests and forest-based products remove
20%
of EU fossil emissions annually

Wood sap is used in cosmetics, syrups & beverages

Leaves are used for essential oils & natural fabric dyes

Young growing trees absorb the most CO₂

NOTHING IS WASTED

Branches are used for energy

Pulp production

Paper, Board & Textile fibre manufacturing

Packaging

recycling

Renewable Energy and Fuels

Various formats of bioenergy

WOOD FIBRE IS CIRCULAR

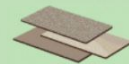

Advanced materials

Wooden construction

Many wood and wood fibre-based products offer a low-carbon alternative to fossil-based materials and retain the carbon for their useful life.

Wood based panels

Packaging, mouldings, gardening & fencing, joinery, furniture

Sawn timber

Biodegradable

Bark is used as cork, mulch & energy

The external parts of the trunk below the bark are used for pulp production

Pulp production uses sawmill chips and saw dust

Sawmills

The best parts of the tree trunks are used for sawn timber

Trees are a source of more than
5000 Products
including advanced materials

The forest-based industry provides added value worth
€166 Billion to the European economy every year
and employs
4 Million Europeans
