

Cartonboard – a safe packaging solution made from a sustainable material

Did you know... Cartons and Cartonboard are not only proven as the most economically and ecologically balanced packaging medium but meet a wide range of regulations for food safety.

Cartonboard is renewable, recyclable and widely biodegradable.

Extremely flexible and versatile: cartonboard is suitable for a range of packaging formats.

Demonstrating the circular economy – cartonboard fibres can be recycled more than 25 times.

Ideal to package a wide range of food items.

R&D investment in new technologies is diversifying carton use. For example:

- Low Migration inks
- Adhesives for food packaging
- Approved Food Contact Materials
- Barriers and Coatings

Public certification schemes, recognised by the Global Food Safety Initiative, ensure regular auditing and compliance with food brand expectations and existing legislations.

Use of Good Manufacturing Practices (GMP) ensures cartons are consistently produced to comply with food contact materials legislations.

A careful selection of the materials used, compliant with existing legislations and industry guidelines, creates food-safe cartons to meet product specific requirements.

Greater industry awareness of requirements thanks to ECMA Food Safety Committee.

Quality control system in manufacturing prioritises quality in every carton.
